Connect Skype with SIP and H.323 networks

RSDevs.com, the makers of custom VoIP solution, today introduced **PSGw 2.0 (Personal Skype Gateway)** a new VoIP application aimed at connection Skype with local SIP and H.323 endpoints and major VoIP providers.

Communication is one of the most important aspects in our everyday lives. **PSGw 2.0** enhance personal and enterprise communication. It helps to make people more effective and improve the efficiency of each communication process.

PSGw 2.0 provides connectivity between Skype and SIP and H.323 devices. Now Skype users can place calls to SIP, H.323 and thus PSTN phones directly without using of SkypeIn/SkypeOut. With **PSGw 2.0** companies can provide client support over Skype, integrate Skype network with enterprise PBX and boost VoIP environment.

RSDevs.com is known for unique and relevant VoIP solutions. RSDevs.com's leadership team has repeatedly distinguished itself by producing and delivering market-leading products and services. RSDevs.com creates innovative solutions for companies competing in a rapidly changing marketplace. Unique communication solutions are specifically tailored to the business needs of the clients. The company's web site at www.rsdevs.com contains additional information.
